

## Class II MO Amalgam Restoration Tooth #T

26.8

### ADEX 2026-2027

Criteria applicable August 1, 2026 through July 31, 2027

| CRITICAL ERRORS             |    |     |
|-----------------------------|----|-----|
| Wrong tooth/surface treated | NO | YES |
| Procedure NOT challenged    | NO | YES |

ACC = Adheres to Criteria

SUB = Marginally Substandard

DEF = Critical Deficiency

| Margin Excess         |                                                                                                                                                                                       |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACC                   | A marginal excess may be detectable either visually or with the tine of an explorer at the restoration-tooth interface but is $\leq 1.0$ mm.                                          |
| SUB                   | A marginal excess may be detectable either visually or with the tine of an explorer at the restoration-tooth interface and is $> 1.0$ mm but $\leq 2.0$ mm.                           |
| DEF                   | There is evidence of marginal excess $> 2.0$ mm.                                                                                                                                      |
| Margin Deficiency     |                                                                                                                                                                                       |
| ACC                   | A marginal deficiency may be detectable either visually or with the tine of an explorer at the restoration-tooth interface but is $\leq 0.5$ mm.                                      |
| SUB                   | A marginal deficiency may be detectable either visually or with the tine of an explorer at the restoration-tooth interface and is $> 0.5$ mm but $\leq 1.0$ mm.                       |
| DEF                   | There is evidence of a marginal deficiency $> 1.0$ mm.                                                                                                                                |
| Gingival Overhang     |                                                                                                                                                                                       |
| ACC                   | There is no gingival overhang.                                                                                                                                                        |
| SUB                   | There is a slight gingival overhang, but it does not adversely affect the gingiva.                                                                                                    |
| DEF                   | There is a gingival overhang that will adversely affect the gingiva.                                                                                                                  |
| Surface Finish        |                                                                                                                                                                                       |
| ACC                   | The surface of the restoration is slightly grainy and free of pits and voids.                                                                                                         |
| SUB                   | The surface of the restoration may be slightly grainy or rough, but it is free from significant pits and voids                                                                        |
| DEF                   | The surface of the restoration is rough and exhibits significant pits and voids.                                                                                                      |
| Adjacent Tooth Damage |                                                                                                                                                                                       |
| ACC                   | There is no evidence or modification or recontouring of the tooth structure adjacent to the restoration (enameloplasty).                                                              |
| SUB                   | There is evidence of removal, modification, or recontouring of tooth structure adjacent to the restoration (enameloplasty).                                                           |
| DEF                   | There is gross enameloplasty.                                                                                                                                                         |
| Interproximal Contact |                                                                                                                                                                                       |
| ACC                   | The interproximal contact is visually closed, and the contact is adequate in size, shape or position, but may demonstrate little resistance to waxed dental floss.                    |
| SUB                   | The interproximal contact is visually closed, but the contact is deficient in size, shape, or position and demonstrates little resistance to waxed dental floss, or shreds the floss. |
| DEF                   | The interproximal contact is visually open; or, it will not allow waxed floss to pass through the contact area.                                                                       |

# ADEX Dental Therapy Examination — Pediatric Manikin Exam

## Class II MO Amalgam Restoration Tooth #T ...cont'd

| Anatomy and Contour |                                                                                                                                                                                                                      |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACC                 | The restoration reproduces the normal occlusal anatomy, proximal contours, and marginal ridge anatomy.                                                                                                               |
| SUB                 | The restoration does not reproduce the normal occlusal anatomy, proximal contours, or marginal ridge anatomy and will not be expected to adversely affect the tissue health.                                         |
| DEF                 | The restoration does not reproduce the normal occlusal anatomy, proximal contours, or marginal ridge anatomy and is expected to adversely affect the tissue health.                                                  |
| Occlusion           |                                                                                                                                                                                                                      |
| ACC                 | The restoration, when checked with articulating paper, shows contacts consistent with those of other teeth in the arch.                                                                                              |
| SUB                 | A. When checked with articulating paper, the restoration is in hyperocclusion inconsistent in size, shape, and intensity with the occlusal contacts on surrounding teeth.<br>B. The restoration requires adjustment. |
| DEF                 | There is gross hyperocclusion such that the restoration is the only point of occlusion in that quadrant.                                                                                                             |
